

## **Improving outcomes from OHCA infographic - Image Description and Plain Text**

### **Image Description/Alt Text:**

The image is an infographic. The background is white with a dark blue banner at the top of the image, and the title is “Improving outcomes from OHCA where we are now”. The infographic features blue icons of people symbolising age and gender. The purpose of the infographic is to visualise the difference Scotland’s out of hospital cardiac arrest strategy has made to survival outcomes.

### **Plain Text version:**

The image is an infographic, titled “Improving outcomes from OHCA infographic” and contains the following text.

Average number of OHCA is 3,200 per year. 36% Women. 64% Men.

OHCA can affect people of all ages at any time. The breakdown is less than age 45 12%, 45-64 28%, 65-74 24%, 75+ 36%.

Before strategy: bystander CPR was received by 41% and 1 in 20 survived to leave hospital.

Latest statistics: bystander CPR is received by 64% and 1 in 10 survive to leave hospital.

Footnote: Baseline figures from 2011-2015 prior to the launch of Scotland’s strategy for OHCA in March 2015.

End of plain text.
